OVERVIEW

This how to guide introduces the *SAP BOT – Generic transaction* automation. Instead of spending precious time and resources on repetitive, manual tasks, let Automate go to work and streamline your IT and business processes with robotic process automation. With the help of Automate we can take over manual steps which greatly reduces the repetitive activities and improves the quality and consistency of the work. The top processes being automated are reports generation, file movement, data import and export, and scheduling batch processing.

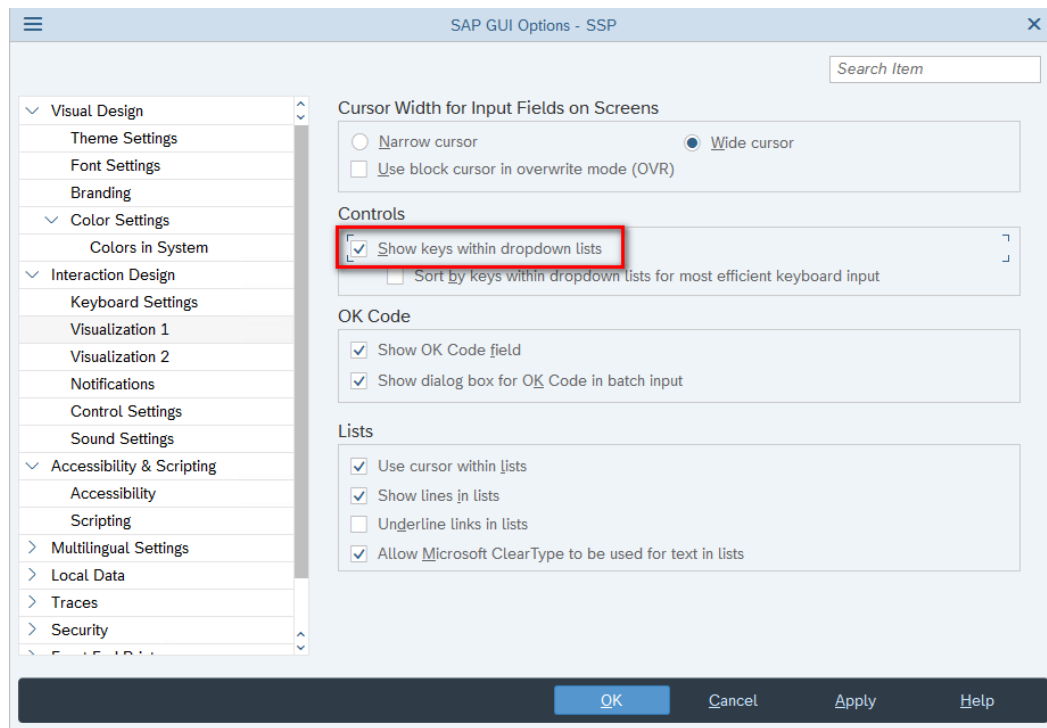

PREREQUISITES

- **Automate:** The SAP BOT depends on Automate software in order to work. The minimal supported versions are:
 - Automate Ultimate 11.2
 - Automate Plus 11.2
 - Automate Desktop 11.2
- **SAP:** our minimal requirements are
 - SAP Logon 760
 - SAP GUI Scripting enabled

- A user with enough privileges to run the recorded task
- Show keys within dropdown lists enabled

- **Automate Markup Language file (.AML):** The primary file type used in Automate which contains the steps of our SAP BOT task
- **Automate constants:**
 - **const_SAPClientNumber:** SAP Client Number. By Default: 001
 - **const_SAPConnection:** SAP Login connection name
 - **const_SAPLanguage:** SAP Language. By Default: EN
 - **const_SapLogonPath:** SAP executable path. By Default: C:\Program Files (x86)\SAP\FrontEnd\SapGui\saplogon.exe
 - **const_SAPPassword:** SAP Login Password
 - **const_SAPUser:** SAP Login Username

SAP Logon 760

Variable Logon Workspace View

Connections

Workspaces	Name	System ...
Local	SAP-SSPP	

const_SAPConnection (with arrow pointing to SAP-SSPP)

✓ New password More

Client **const_SAPClientNumber**

User **const_SAPUser**

Password **const_SAPPassword**

Logon Language **const_SAPLanguage**

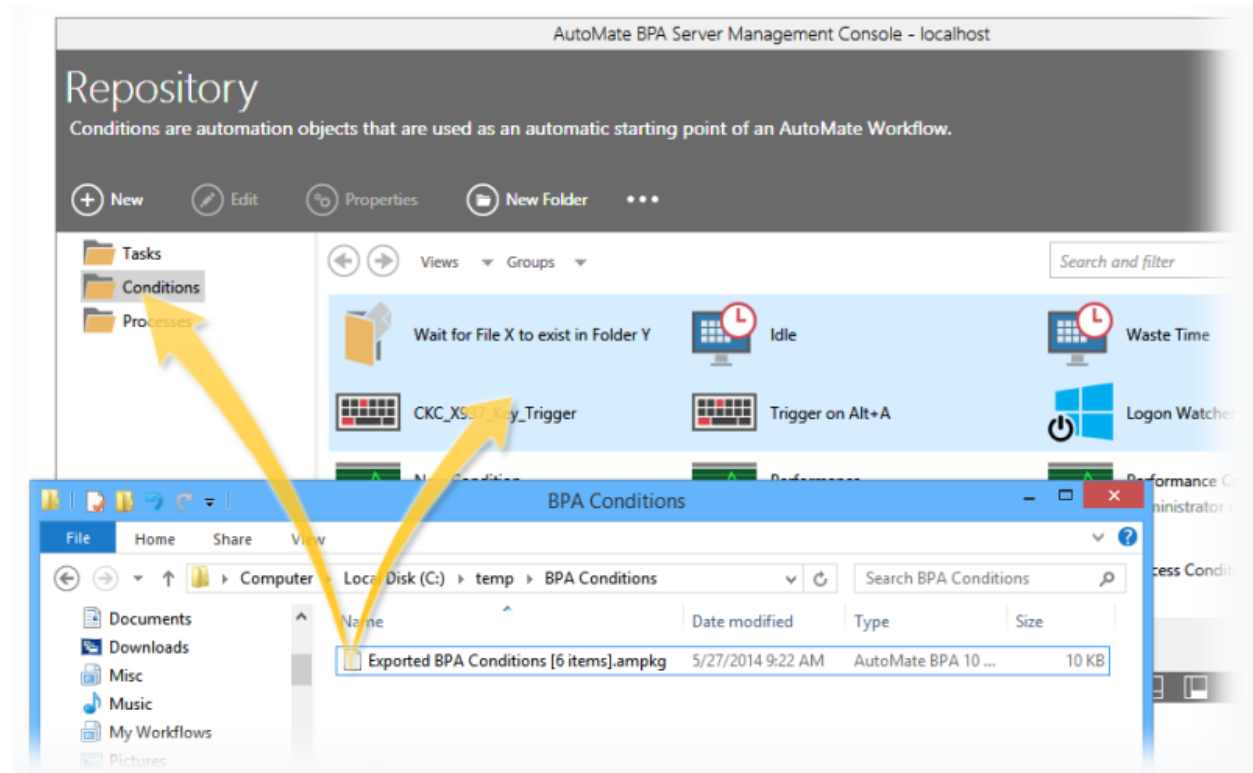

HOW TO IMPORT AN AUTOMATE TASK

Compatible file types can be imported to the repository via drag-and-drop

From the [Server Management Console](#), navigate to the Repository section

Drag the desired file(s) from its original location and drop them into the folder in the [SMC](#). Files can be dropped into the folder icon or the main panel (as shown below). Imported object(s) are automatically placed into their corresponding repository location.

HOW TO CREATE SAP GUI SCRIPTING

You should be able to make your own script by following this document. It is not necessary to have programming knowledge.

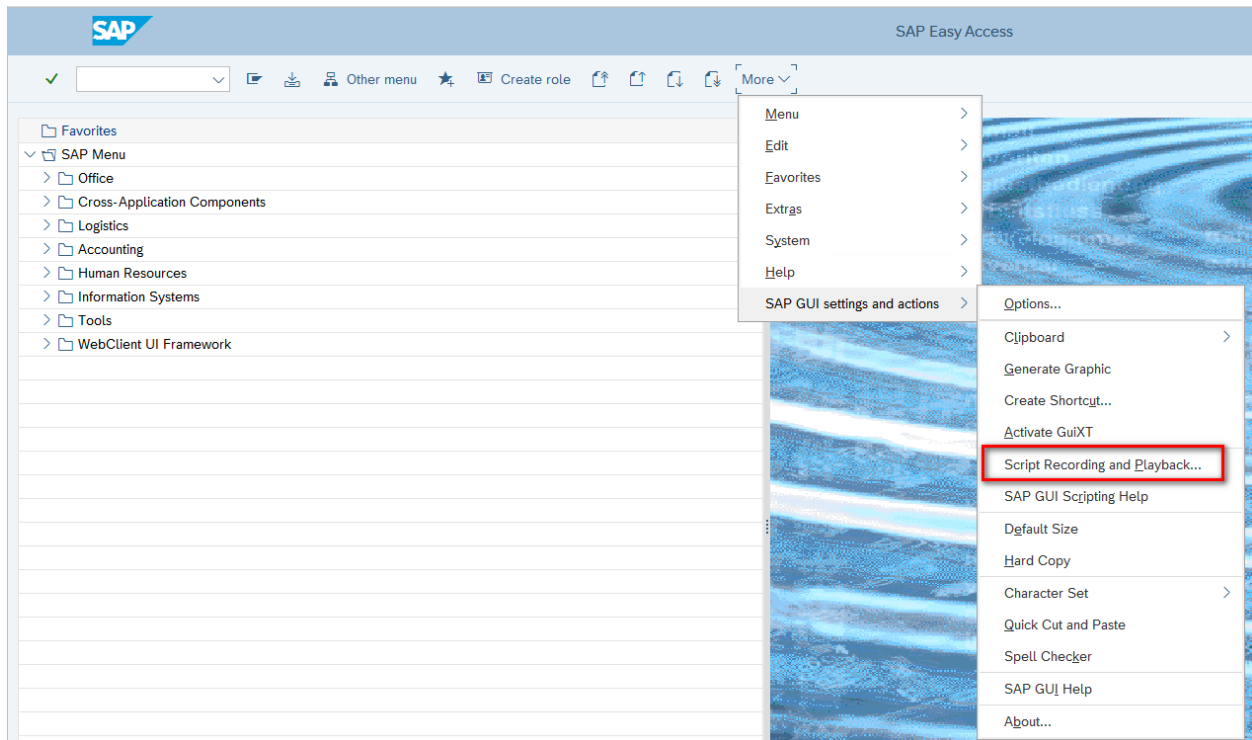

The following screenshots show how to create the main script file in a few minutes or even seconds:

[Login](#) to SAP using your current credentials

A screenshot of the SAP login interface. At the top left is the SAP logo. Below it is a search bar with a green checkmark icon and a dropdown arrow. To the right of the search bar are the labels "New password" and "More" with a dropdown arrow. Below the search bar are four input fields: "Client" with the value "001", "User" with the value "DARIO.SORIA", "Password" with a masked password of 12 black dots, and "Logon Language" with the value "EN".

Client	001
User	DARIO.SORIA
Password	●●●●●●●●●●●●
Logon Language	EN

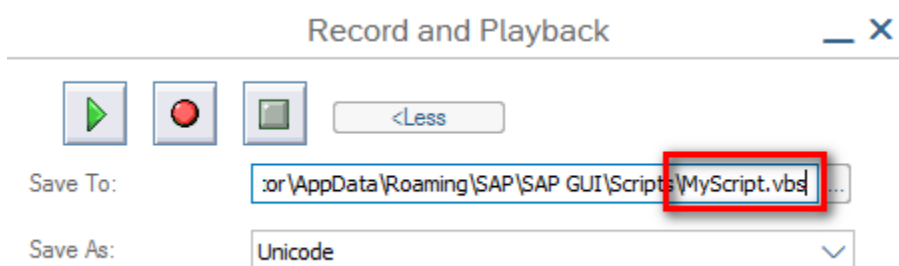

Navigate to [Script Recording and Playback](#)

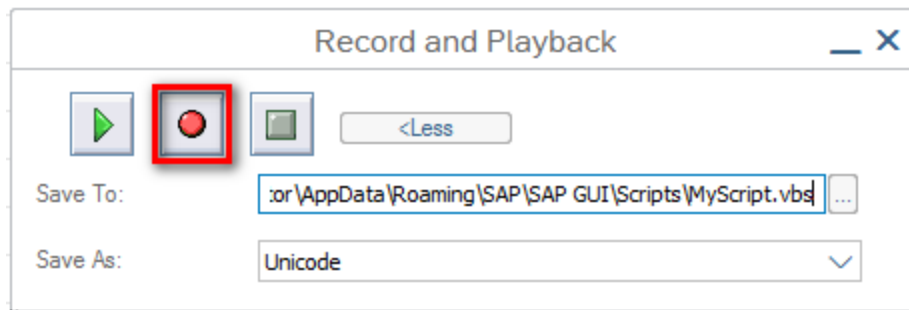

Expand the [More](#) button

Complete the [script name](#) (NOTE: Don't forget the vbs extension)

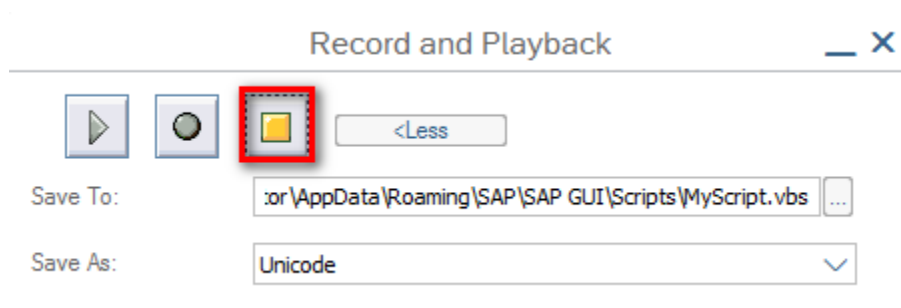

Start your recording pressing the [Record Script](#) button

Execute the [transaction](#) that you want to save in the script

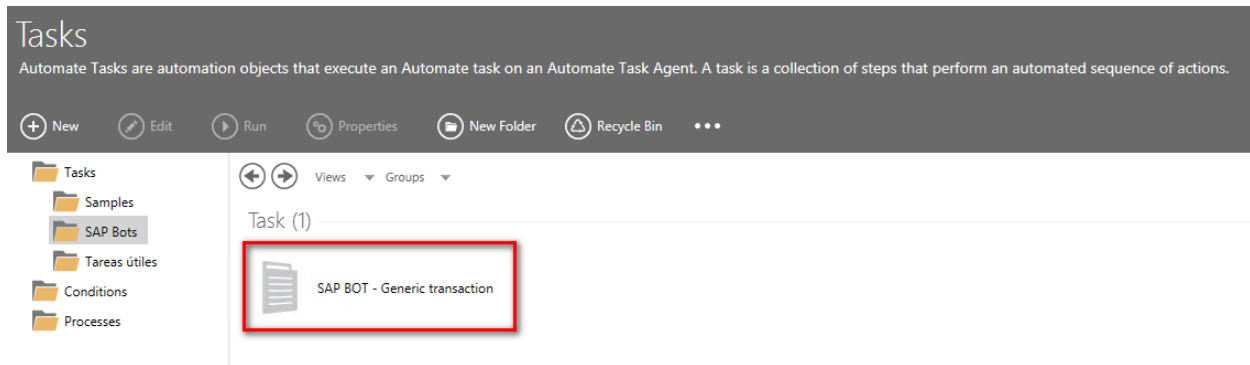

Once completed, stop the recording using the [Stop Recording](#) button. This will complete the generation of the Script and the file will be saved in the selected Path

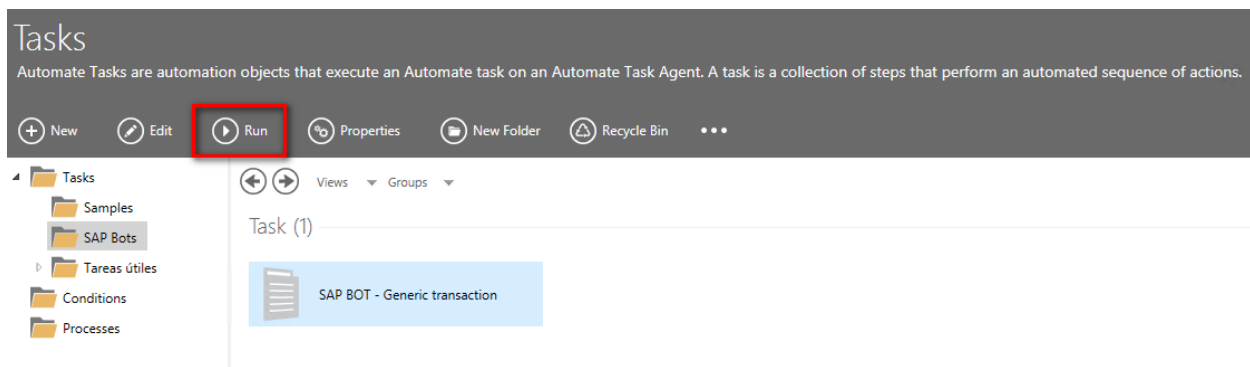

HOW TO EXECUTE THE SAP BOT GENERIC TRANSACTION TASK

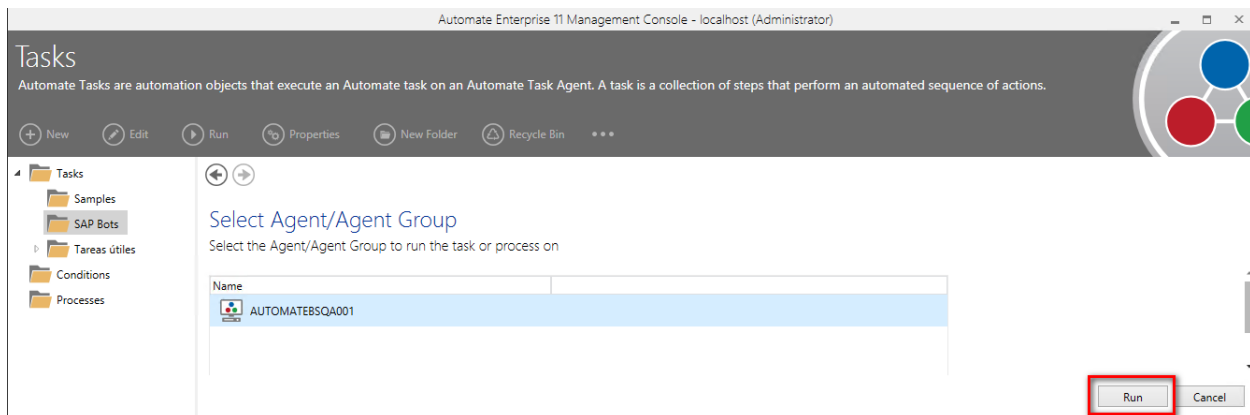

Open the Server Management Console and locate the imported task

Select the task and click on **Run**

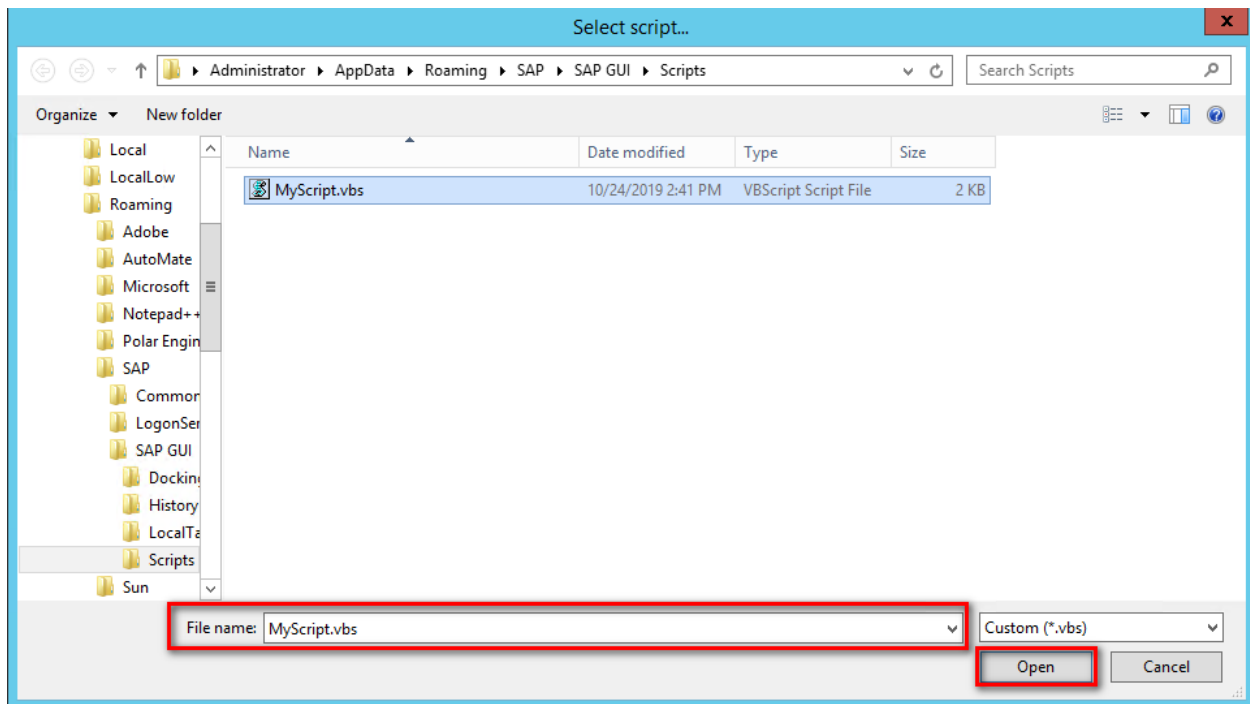

Select your **Agent** and click on **Run** again

If this is the **first time** running the script, a Windows dialog will appear asking for the location of the **recorded script**

Select the file and click on **Open**

Subsequent executions will not ask for the file name again

APPENDIX A - TROUBLESHOOTING

There are 2 very useful folders located under that directory.

- **Scripts:** contains the script to be executed. When you run the task for the first time, a copy of your script is created on this directory. Further executions use this script instead of your original script. If you modify your script and want Automate to use the new scripting, all you got to do is delete the Script.vbs file in this location *C:\AutoMate\Tasks\SAP BOT - Generic transaction\Scripts*. Of course, you will be prompted again to select the script file you want to execute
- **Logs:** Each iteration of our BOT creates a Log file for troubleshooting. You can locate the log file under *C:\AutoMate\Tasks\<<TASK NAME>>*. By Default, the task name is SAP BOT - Generic transaction
